

**E Sample documentation for circulatory determination of death
(in the context of organ donation)**

Affix patient label here

Hospital:	
Determination of circulatory death in the context of organ donation	
A. Cardiorespiratory support was withdrawn at:	Date and time (24 hour clock)
B. I have determined that the following signs were absent:	
1. Spontaneous movement	Please ✓
2. Breathing	
3. Circulation, as evidenced by absent arterial pulsatility for 5 minutes using intra-arterial pressure monitoring and confirmed by clinical examination (absent heart sounds and/or absent central pulse) OR, in cases without an arterial line, by electrical asystole for 5 minutes on the electrocardiogram and confirmed by clinical examination	
C. Death occurred at:	Date and time (24 hour clock)
